Usage Instructions For Vita-Rite Vitamins

- Add vitamin to milk prior to pasteurization, preferably after separation. Because Vitamins A&D are fat-soluble, they will be removed along with the milk fat if run through a separator. However, for those processing situations that require vitamin addition prior to separation, Vita-Rite products with a “W” designation have been specially formulated for addition to milk before separation.
- Normal agitation will ensure proper dispersion.
- Do not over-fortify. FDA fortification requirements are as follows:

	Minimum/quart of milk	Maximum/quart of milk
Vitamin A	2,000 IU	3,000 IU
Vitamin D	400 IU	600IU

- Avoid exposure of fortified milk to excessive light or aeration.
- All SensoryEffects vitamins are bottled in tamper-evident containers. Inspect all bottles upon receipt.
- Any package showing evidence of tampering should not be used.
- All SensoryEffects vitamins are certified Kosher. Designated vitamins are certified Kosher for Passover.

Storage

All vitamins should be stored in a cool, dry and dark location.

Package

1-gallon bottles packed 4 per case. Products are color-coded on labels to avoid confusion in the plants.
